I hereby authorize payment of medical benefits billed to my insurance to Five Towns Neurology PC. I hereby accept responsibility for payment for any service(s) provided to me that are NOT covered by my insurance. I also accept responsibility for fees that exceed the payment made by my insurance, if the practice does not participate with my insurance. I agree to pay all copayments, coinsurances and deductibes at the time of service(s) rendered. (Note many insurance plans have high deductibles for standard care that our practice has no way to be aware of.)

The Privacy Rule generally requires healthcare providers to take reasonable steps to limit the use or disclosure of, and requests for PHI to the minimum necessary to accomplish the intended purpose. These provisions do not apply to uses or disclosures made pursuant to an authorization requested by the individual.

Note: Uses and disclosures for treatment, payment and basic healthcare operations may be permitted without prior consent in an emergency.

THE EPWORTH SLEEPINESS SCALE

- ***The Epworth Sleepiness Scale is widely used in the field of sleep medicine as a subjective measure of a patient's sleepiness.***
- ***The test is a list of eight situations in which you rate your tendency to become sleepy on a scale of 0 (no chance of dozing off) to 3 (high chance of dozing).***
- ***When you finish the test, add up the values of your responses.***
- ***Your total score is based on a scale of 0 to 24.***
- ***The scale estimates whether you are experiencing excessive sleepiness that possibly requires medical attention.***

How Sleepy Are You?

- How likely are you to doze off or fall asleep in the following situations?
- You should rate your chances of dozing off, not just feeling tired.
- Even if you have not done some of these things recently try to determine how they would have affected you if you were to do them.
- For each situation, decide whether or not you would have:

> No chance of dozing = 0

> Slight chance of dozing = 1

> Moderate chance of dozing = 2

> High chance of dozing = 3

Situation	Chance of Dozing
Sitting and reading	
Waching TV	
Sitting inactive in a public space (e.g. a theater or a meeting)	
As a passenger in a car for an hour without a break	
Lying down to rest in the afternoon without a break	
Sitting and talking to someone	
Sitting quietly after a lunch without alcohol	
In a car, while stopped for a few minutes in traffic	
TOTAL SCORE =	

Score Analysis

0-7: Within normal range
8-9: Average amount of daytime sleepiness
10-15: Possible excessive sleepiness
16-24: Strongly suggestive of excessive sleepiness
